

Working with Healthcare at Home allows me to manage my private practice nicely and safely while knowing patients are receiving an effective and friendly service. I can get a patient's bloods done and their vitals assessed and make decisions on continuing therapy, which helps me manage their cancer better.

Treatment at home saves patients the hassle of attending hospital and patients love it, especially the idea that the schedule is designed to fit around their lives. Nurses will come and administer drugs at a convenient time, and patients know the nurses can contact me easily, which is reassuring.

Healthcare at Home provides patients with a safe, effective and friendly service, which helps me manage their cancer better.

As well as allowing patients to live their lives more normally than if they were frequently attending hospital it brings an extra human element to their care because they see the same nurses so build up a relationship, which helps with the cancer journey.

I've been working with Healthcare at Home for around ten years now and we've built up a team relationship, which is great. I'd most definitely recommend Healthcare at Home to my colleagues. It allows patients' lives to continue less affected by the cancer and I'd love this type of model to be available for all.

Professor Joe O'Sullivan.

Professor O'Sullivan describes his experience of working with Healthcare at Home and explains why it's easier for patients to get on with their lives if they spend less time coming into hospital.

150 chemotherapy nurses
All our staff are highly trained in delivering cancer care.

Over 100 cancers treated using SACT
We can safely provide any specialised cancer treatments in the home that can be delivered in a chemotherapy day suite.

40,000 patient visits every year
We are one of the UK's largest providers of cancer homecare with coverage across the UK.

We make it easy
Consultants are provided with a highly skilled dedicated team including their own account manager and patient liaison lead.
